This report was prepared for
The New Jersey Housing and Mortgage Finance Agency
by
Monarch Housing Associates
I. Introduction

NJ Counts 2014

NJ Counts 2014, New Jersey’s annual Point-In-Time (PIT) Count of the Homeless, provides a statewide snapshot of homeless households in our communities; where they find shelter, what their needs are, and what factors contribute to making them homeless. The 2014 Count reveals important demographic and other information about families and individuals who were homeless on the night of Tuesday, January 28th, 2014, and was carried out with the help of government agencies, community-based organizations, and local volunteers.

In New Jersey, each County’s count is planned, coordinated, and carried out locally, and the information gathered enables each community to better allocate housing resources and services in order to prevent and end homelessness. The PIT Count is the only opportunity throughout the year for most communities to take a comprehensive look at the total homeless population, and is especially crucial in assessing the needs of the unsheltered homeless.

Acknowledgements

Monarch would like to thank all Point-In-Time Coordinators, homeless service providers, agencies, and volunteers who participated in NJ Counts 2014. Monarch would also like to specifically thank Bergen County for providing both Spanish and Korean translations of the 2014 paper survey tool.

Finally, a special acknowledgement is given to all the respondents who were willing to share personal information about themselves and their households’ experiences in order to help our communities better understand and assist the homeless.

Funding for coordinating New Jersey’s 2014 Point-In-Time and producing this report was provided by New Jersey’s Housing and Mortgage Finance Agency (NJHMFA).

This Report

The findings in this report are presented in the following sections:

1. Total homeless population;
2. Those experiencing chronic homelessness (families and individuals that have been homeless for a year or longer, or who have experienced at least four episodes of homelessness in the last three years, and have a disabled head of household); and
3. Unsheltered families and individuals;
The structure of this report is intended to provide not only an overall snapshot of the homeless population counted in the Point-In-Time, but also to focus attention on the homeless subpopulations that are the most in need, and those that represent federal funding priorities set forth by the U.S. Department of Housing and Urban Development (HUD).

In addition to the main findings presented in the body of this report, Appendix A includes charts illustrating the responses to all survey questions that were part of the 2014 Point-In-Time Count.

II. Data Collection and Methodology

Requirements for the Count

As part of its Continuum of Care (CoC) application for homelessness funding, HUD requires that jurisdictions across the nation conduct a statistically reliable and unduplicated count of the homeless for one overnight period during the last 10 days of January. New Jersey’s Continuums of Care (regional networks of organizations, agencies, and community stakeholders that plan local efforts to help the homeless) conduct an annual count of sheltered homeless persons (i.e. persons in emergency shelter, transitional housing for the homeless, and Safe Haven programs) and at least a biennial count of unsheltered homeless persons. 2014 was not a HUD-required full count year.

In their Point-In-Time Count, CoCs must count and report all individuals and families who meet the criteria in paragraph (1)(i) of the homeless definition in 24 CFR 91.5 of HUD’s Homeless Definition Rule on the night designated for the count. This includes individuals and families who are:

- **Sheltered**, or “living in a supervised publicly or privately operated shelter designated to provide temporary living arrangement (including congregate shelters, transitional housing, and hotels and motels paid for by charitable organizations or by federal, state, or local government programs for low-income individuals),” or

- **Unsheltered**, “with a primary nighttime residence that is a public or private place not designed for or ordinarily used as a regular sleeping accommodation for human beings, including a car, park, abandoned building, bus or train station, airport, or camping ground.”

Because this report focuses on those respondents who meet HUD’s definition of homeless, it does not include information about those who may be at risk of homelessness, precariously housed, or considered homeless under other federal statutes. Persons who, on the night of the count, were living doubled up with another household, living in illegal or
overcrowded units, being discharged from a jail or health facility with no subsequent residence, scheduled to be evicted, or paying for its own motel unit were not considered homeless. All survey information collected for respondents who were at risk of homelessness or precariously housed was preserved and shared with each community for local planning purposes, but is not included in this report unless otherwise noted.

Data Collection Methods

Monarch Housing Associates provided each of New Jersey’s 21 counties with in-person training, online video and print training guides, a practice online survey tool, and technical assistance to aid in the data collection process for New Jersey’s 2014 Point-In-Time Count. Point-In-Time Coordinators in each county disseminated PIT training materials and helped facilitate local planning around implementation of the PIT count in their communities.

This year marked the beginning of a new process for collecting survey data for New Jersey’s PIT Count. The count of homeless persons who were sheltered on the night of January 28th, 2014 was primarily taken from New Jersey’s Homeless Management Information System (HMIS), while the count for the unsheltered and those sheltered by non-HMIS programs was conducted using a revised Paper Survey tool, personal interviews, and agency client records. This strategy was designed in accordance with HUD guidance regarding conducting both sheltered and unsheltered Point-In-Time Counts.

The 2014 PIT Survey tool was updated to more closely mirror information collected in HMIS so that the data was comparable for important factors such as household characteristics, income, services needed, and factors contributing to homelessness. Agencies updated all HMIS data to accurately reflect the night of the count, and those with programs that were non HMIS-participating submitted information from interviews utilizing the Paper Survey tool through SurveyMonkey.

Limitations

1. HUD requires a count of sheltered homeless persons and families annually, but only a biennial count of those who are unsheltered. Even though New Jersey conducts both a sheltered and unsheltered count each year, the comprehensiveness of the unsheltered count may be influenced by the fact that it is not a HUD-required full count year. This report includes comparison data from 2010 to 2014. 2010, 2012, and 2014 were not HUD required full reporting years while 2011 and 2013 were.

2. The winter of 2013 to 2014 was particularly cold, setting record low temperatures in parts of New Jersey. The night of the count, January 28, 2014, was cold enough to warrant a ‘Code Blue’ in many communities, which mandates that emergency warming stations or shelters be set-up for the unsheltered. While this means that many more people are able to sleep in a warm place, it may skew Point-In-Time data to show fewer unsheltered households than are actually present in communities on a regular basis.

NEW JERSEY’S 2014 POINT-IN-TIME COUNT | 5
3. The information presented in this report is based on survey interviews and agency HMIS records. In some cases, survey respondents did not answer every question completely, and homeless provider agencies did not report all client information on the night of the count. For this reason, the numbers and percentages reported may not equal the total number of homeless respondents due to missing data. All numbers, percentages, and figures contained in this report are calculated based on the total number of actual responses, and do not represent null or missing values unless otherwise noted.

4. Because the Point-In-Time Count represents only one night during the last ten days of January, it is widely accepted that the PIT will undercount the overall homeless population. Undercounting may occur due to difficulty finding those living on the street, incomplete information for people who do not agree to complete the survey, a shortage of volunteers to cover a geographic area, or homeless persons choosing not to seek housing services on the night of the count. This data should not be viewed as a comprehensive measurement of all families and individuals who experience homelessness throughout the year, but rather as a minimum number of persons who experience homelessness in New Jersey on a given night.

De-duplication

Monarch Housing Associates collected and merged all HMIS and SurveyMonkey Point-In-Time data from each community into its combined database. Monarch generated two unique identifiers, one more general and one more in-depth, based on the identifying information for each individual record. Using a formula, these unique identifiers were compared to all identifiers for other records in the database to identify potential duplicates.

All duplicates detected through comparison of unique identifiers were then de-duplicated by the following process:

1. Multiple HMIS records where all fields match – a single record was preserved, and all duplicates were removed;
2. Multiple SurveyMonkey records where all fields match – a single record was preserved, and all duplicates were removed;
3. Comparing HMIS to SurveyMonkey records where unique identifiers, disabilities, income sources, household size, and location on the night of the count all match – the HMIS record was preserved and the SurveyMonkey duplicates were removed.

Following this de-duplication of the data, communities were given preliminary data to review all identified duplicates and records with missing data. Communities were then able to update records with missing information and/or request any additional de-duplication they determined prudent. Monarch then updated and removed additional records based on community feedback prior to completing its final analysis and report.
III. Findings for Total Homeless Population

Key Findings

- On the night of January 28th, 2014 a total of 514 households, including 546 persons, were experiencing homelessness in Atlantic County, according to the 2014 Point-In-Time Count.
- A total of 139 households, with 141 persons, were identified as chronically homeless.
- 68 unsheltered homeless persons were counted.

Total Homeless Population

On the night of January 28th, 2014, a total of 546 persons, in 514 households, were experiencing homelessness in Atlantic County, according to the 2014 Point-In-Time Count. This is a decrease of 200 persons (26.8%) and 60 households (10.5%) from 2013. Atlantic County had 4% of New Jersey’s statewide homeless population in 2014.

Figure 1 shows that, in 2014, 469 homeless persons stayed in emergency shelters, 9 stayed in transitional housing, and 68 were living unsheltered on the night of the count. The total number of those counted in emergency shelters showed a reduction of 205 persons...
(30.4%) from 2013, and there were 3 (25%) fewer persons in transitional housing. However, the number of unsheltered persons increased by 8 (13.3%), from 60 to 68.

Figure 1 also shows that, over the past five years, the total number of homeless persons has been fluctuating in Atlantic County, with the highest count in 2013 (746). As Figure 2 shows, 36% of homeless households in Atlantic County reported that their last permanent address prior to becoming homeless was outside of the county.

Over the five-year period from 2010 to 2014, the number of homeless persons was down 7%. The number of persons who were unsheltered and in transitional housing went down overall as well, by 48% and 82%, respectively. The number of persons in emergency over the same period, however, trended upward by 15.5%.

Homeless Families and Individuals

When reading the data regarding different types of homeless households, it is important for the reader to remember that, in this report, ‘household’ means “any group of persons who, if they were able to attain permanent housing, would choose to live together; and, shared the same sleeping arrangements on the night of the count.” Three different types of households are discussed below: households with adults and children under 18 (‘families’), households without children (‘individuals’), and households with only children under 18 (‘unaccompanied youth’).

Of the 514 homeless households counted in Atlantic County in 2014, 18 (3.5%) were families with at least one child under the age of 18 and one adult. These families included 48 persons, 29 children under age 18, and 19 adults. This represents 68 (79%) fewer homeless families than in 2013. The average family size was 2.6 persons. Figure 3 shows that all 18 families were staying in emergency shelter on the night of the count.

![Fig. 2. Percentage of Households by County of Last Permanent Address](image)

![Fig. 3. Homeless Households by Housing Situation](image)
96% (493) of the homeless households counted in Atlantic County were households without children under 18, and they were composed of 495 adult individuals. 418 (85%) of these adult-only households were staying in emergency shelters, 9 (2%) were in transitional housing, and 66 (13%) were unsheltered. Atlantic County has seen the number of adult-only households increase by 5 (1%) since 2013.

As Figure 3 indicates, there were 3 youth only households reported in 2014, an increase of 3 from 2013. All of these households were one-child households. These unaccompanied youth were all staying in emergency shelters on the night of the count.

**Demographics**

![Fig. 4. Age Range by Housing Situation](image)

The vast majority (437 persons, 80%) of those experiencing homelessness in Atlantic County on the night of the count were adults over age 24. There were a total of 61 (11.2%) homeless young adults between 18 and 24 years old, and 32 (5.8%) children under 18 years old as well. Figure 4 shows that the majority of homeless children who were under the age of 18 were between 6 and 17 years of age (20, 62.5%). The age range most represented, with 146 persons and 26.7% of the total homeless population, was adults between 25 and 34.

30.5% (166) of homeless respondents were female, and 69.5% (378) were male.

49% of respondents identified their race as White, making that the largest racial subgroup of homeless persons reported. The next largest group self-identified as Black or African American (44%), followed by those identifying as Multi-Racial (2.9%), Asian (1.6%), and American Indian/Alaska Native (0.5%). With regard to ethnicity, 12% of respondents identified themselves as Hispanic.
Disabilities

Figure 5 illustrates that 56% of homeless persons reported having some type of disability. 73.3% of adults 18 or older reported some type of disability compared to 12.5% of children. Figure 6 shows the number of the homeless persons that identified as having various disabilities. The most common disabilities included Mental Health Issues and Substance Abuse Disorders.

Among disabled adults, 61.2% reported Mental Health Issues making this the most prevalent disability; representing 36.5% of the total adult homeless population. 51.5% of disabled adults reported a substance abuse disorder. Among disabled homeless children, 50% reported a chronic health condition, and 50% reported a developmental disability.

Victims of Domestic Violence

On the night of the count, in Atlantic County, 68 homeless households reported having a victim of domestic violence. Figure 7 shows that the majority (92.6%) of these households were adult-only, individual households. 5 families with at least 1 adult and 1 child under the age of 18 were counted. 2 adult individuals and 1 family were in domestic violence shelters, while 82.4% of all victim households were in other emergency shelters.
Veterans

In its plan, Opening Doors: Federal Strategic Plan to Prevent and End Homelessness, the United States Interagency Council on Homelessness (USICH) has prioritized ending homelessness among veterans by 2015. Many communities in New Jersey have also been working hard to end homelessness among our country’s servicemen and women.

38 homeless veterans were counted on the night of the count, 6 fewer (13.6%) than 2013. All were adult individuals. The largest contingent of homeless veterans was staying in Emergency Shelter (81.5%). In addition, 5 were unsheltered (13.1%), and 2 veterans were in transitional housing (5.2%).

Veterans experiencing homelessness in Atlantic County were predominantly male (97.3%), and the most common racial background identified among them (20 veterans, 52.6%) was White, while 16 (42.1%) identified as Black or African-American. Figure 9 Illustrates the percentage of homeless veterans by age range.

1 homeless veteran reported being a victim of domestic violence. 29 of the 38, 76.3%, reported having some kind of disability. The most common disability cited among these was mental health issues; with 20 veterans (52.6%) reporting this disability. 14 veterans (36.8%) said they had a substance abuse disorder, and 14 more (36.8%) reported chronic health conditions. The two types of service that homeless veterans sought most were housing (86.8%), financial assistance for housing (55.3%).

Income and Benefits

Among all households experiencing homelessness on the night of the count, 26.2% had no source of income, and 0.5% reported receiving some form of earned cash income. The two most common sources of non-earned income among households were
General Assistance (GA) and Temporary Assistance for Needy Families (TANF), with 21% and 12.6% receiving each, respectively. Figure 11 shows the average monthly income for all homeless households.

17.3% of respondents reported that their household was receiving no kind of non-cash benefit on the night of the count. Food Stamps, or the Supplemental Nutrition Assistance Program (SNAP), was the top reported non-cash benefit, and was received by 57% of households. 40% were receiving Medicaid, and 17% were receiving Temporary Rental Assistance from the Board of Social Services.

### Length of Homelessness

Figure 12 shows the range lengths of homeless episodes experienced on the night of the count by respondents in Atlantic County. 124 households (24%) reported that their most recent, continuous episode of homelessness had lasted between 8 days and 1 month. At the other end of the spectrum, 115 households (22.4%) reported that they had been homeless for more than 1 year.

### Cause of Homelessness

When asked to share the primary factor that contributed to, or caused, their homelessness, more respondents attributed their homelessness to a loss or reduction of job income or benefits (155 households, 30%) than any other cause. As Figure 13 shows, the next most common factor reported was being asked to leave a shared residence (18%).

When respondents were asked ‘what was your residence prior to your current living situation?’ more said they had been staying in permanent housing (38%) than any other type of residence. 24% reported living with friends or family prior to their current living situation.
IV. Findings for the Chronically Homeless

Someone with a long-term disabling condition, who has been continually homeless for a year or more, or at least four times in the past three years, meets HUD’s definition of chronically homeless. Any family with one adult that meets this definition is considered a chronically homeless family.

In 2010, USICH established the goal of ending chronic homelessness by 2015. This goal reflects the urgency of helping to house those persons who have not been able to remain stably housed over the course of an extended period of time. Chronically Homeless persons are among the most vulnerable homeless groups, and providing effective supportive services and case management may be required in order to help some stay in the housing they need. Prioritization of new Continuum of Care funding opportunities has recently been giving some communities in New Jersey new resources for housing this subgroup.
Total Chronically Homeless Population

139 households, made up of 141 total persons, were chronically homeless in Atlantic County, according to the 2014 Point-In-Time Count. This is an increase of 17 persons (14%) from 2013. The rate of chronic homelessness as a percentage of overall homelessness increased from 21.6% to 25.8%.

Figure 14 shows the number of chronically homeless respondents who were in emergency shelter or living unsheltered in Atlantic County from 2010 to 2014. Over the past five years, the overall number of chronically homeless persons has risen year over year (by 67 persons, 90.5%). Since 2010, the number of unsheltered chronically homeless persons has gone down, but come back up, remaining nearly the same.

Families and Individuals

In the interest of giving an accurate comparison, the total number of chronically homeless households and persons in the previous section reflects all the information required for submission to HUD for this subpopulation, including the total number of chronically homeless adult individuals and the total number of persons in chronically homeless families. However, this number excludes any adults who were part of an adult-only couple with a chronically homeless individual and any youth in youth-only households. Therefore, the analysis below also includes data for 2 adult individuals who were part of adult-only couples, bringing the total number of chronically homeless persons to 143.
Of the 139 chronically homeless households counted in 2014, only 1 (0.7%) was a family with at least one child under the age of 18 and one adult. This family included 3 persons. All of the chronically homeless families stayed in emergency shelters on the night of the count.

There were 140 chronically homeless persons in 138 households with no children 17 or younger counted in Atlantic County, making up 99.3% of the chronically homeless population.

There were 108 (78.2%) of these individuals in emergency shelters, an increase from 91 in 2013 (19% increase). 30 (5%) chronically homeless individuals were unsheltered on the night of the count, up from 23 (30% increase) in 2013.

Demographics

Of the 143 total chronically homeless persons, 5 (3.5%) were between 18 and 24 years old, and just 2 (1.4%) were children 17 or younger. There were no children under 5 years old counted in 2014. The largest number of chronically homeless persons (47, 32.9%) in a single age category fell between the ages of 45 and 54 years of age. Figure 16 shows the largest number of unsheltered chronically homeless persons were in this age range as well.

73.4% of those counted as chronically homeless were male, and 26.6% were female.

The largest racial subgroup of homeless persons reported their race as White (57%). The next largest group self-identified as Black or African-American (38%), followed by persons identifying as Multi-Racial (2%). 14 chronically homeless persons (9.8%) identified themselves as Hispanic.

Of the 139 chronically homeless households counted in 2014, only 1 (0.7%) was a family with at least one child under the age of 18 and one adult. This family included 3 persons. All of the chronically homeless families stayed in emergency shelters on the night of the count.

There were 140 chronically homeless persons in 138 households with no children 17 or younger counted in Atlantic County, making up 99.3% of the chronically homeless population.

There were 108 (78.2%) of these individuals in emergency shelters, an increase from 91 in 2013 (19% increase). 30 (5%) chronically homeless individuals were unsheltered on the night of the count, up from 23 (30% increase) in 2013.

Demographics

Of the 143 total chronically homeless persons, 5 (3.5%) were between 18 and 24 years old, and just 2 (1.4%) were children 17 or younger. There were no children under 5 years old counted in 2014. The largest number of chronically homeless persons (47, 32.9%) in a single age category fell between the ages of 45 and 54 years of age. Figure 16 shows the largest number of unsheltered chronically homeless persons were in this age range as well.

73.4% of those counted as chronically homeless were male, and 26.6% were female.

The largest racial subgroup of homeless persons reported their race as White (57%). The next largest group self-identified as Black or African-American (38%), followed by persons identifying as Multi-Racial (2%). 14 chronically homeless persons (9.8%) identified themselves as Hispanic.
Disabilities

In order to meet the definition of chronically homeless, at least one adult in each household must have some kind of disability. The disabilities most commonly identified were mental health issues (66.4%) and substance abuse disorders (53.8%). The complete numbers of reported disabilities among the chronically homeless can be seen in Figure 17.

Subpopulations

On the night of the count, 29 chronically homeless persons in Atlantic County reported being victims of domestic violence (20.3%). All victims were adult individuals, 24 of whom were staying in emergency shelters, including domestic violence shelters, and 5 that were unsheltered.

There were 14 veteran individuals identified as chronically homeless on the night of the count (9.8%); 1 of these veterans was living unsheltered.

Income and Benefits

Among all the chronically homeless respondents on the night of the count, 23.7% reported receiving no type of cash income. Figure 18 shows the sources of income received. The most common source of cash income among chronically homeless respondents was General Assistance, which was received by 26.6%. None reported any earned income.
15.8% of chronically homeless households reported they were not receiving any type of non-cash benefit on the night of the count. Food Stamps (SNAP) was the top reported non-cash benefit among the chronically homeless, with 53.2% receiving this benefit. A significant percentage, 40.1%, reported receiving Medicaid. 15.1% reported receiving Medicare.

Length of Homelessness

Figure 19 shows more than half of chronically homeless households (75, 52.4%) reported that their most recent, continuous episode of homelessness had lasted for more than 1 year. This was the most common answer followed by 14.7% reporting being homeless between 8 days and 1 month.

Cause of Homelessness

When asked to share the primary factor that contributed to, or caused, their homelessness, more chronically homeless respondents cited a loss or reduction of job income (23.1%) than any other. As Figure 20 shows, many also said drug or alcohol abuse (21.7%).
V. Findings for the Unsheltered Homeless

HUD’s definition of “unsheltered homeless” applies to any individual or family “with a primary nighttime residence that is a public or private place not designed for or ordinarily used as a regular sleeping accommodation for human beings, including a car, park, abandoned building, bus or train station, airport, or camping ground.”

Unsheltered homeless individuals and families are among those with the most critical housing needs in a community. The unsheltered are especially vulnerable in the cold weather and the elements, which are in evidence at the end of January when the Count takes place. The Point-In-Time survey can play an important role in helping communities understand why some of the homeless remain unsheltered, and who is included in this group.

Total Unsheltered Homeless Population

66 households, made up of 68 persons, were living unsheltered in Atlantic County, according to the 2014 Point-In-Time Count. This is an increase of 9 households (15.8%), and 8 persons (13.3%) from 2013.

Figure 21 shows the number of unsheltered respondents from 2010 to 2014. Despite the increase of unsheltered persons in 2014, over the past five years the numbers have gone down overall. Since 2010, the number of unsheltered homeless persons has dropped 48% in Atlantic County.

Families and Individuals

There were no unsheltered families with at least 1 adult and 1 child counted in 2014. 64 of the 66 unsheltered households counted were households with just 1 adult individual. There were also 2 adult-only couples.
Demographics

The largest portion of the 68 unsheltered persons counted in 2014, 26.5%, was between 55 and 64 years old. 22.1% were between 25 and 34. Only 1 (1.5%) was between 18 and 24.

56 of the 68 unsheltered persons were male (82.4%). 35 (51.5%) identified their race as White and 23 (33.8%) identified as Black or African-American. 9 (13.3) of the unsheltered respondents identified as Hispanic.

Disabilities

43 of 68 unsheltered persons (63.3%) reported having some disability. The disabilities most commonly identified were mental health issues (36.8%), substance abuse disorders (33.8%), and chronic health conditions (27.9%). The complete numbers of reported disabilities among the unsheltered can be seen in Figure 23.

Subpopulations

On the night of the count, 7 unsheltered homeless persons (10.3%) in Atlantic County reported being victims of domestic violence.

There were 5 unsheltered veterans on the night of the count.

Income and Benefits

Among all the unsheltered households on the night of the count, 29 (43.9%) reported having no source of cash income. The average monthly income among unsheltered households was approximately $327. 16.7% of unsheltered households received SSDI,
making it the most common source of income. Figure 24 shows the sources of income received.

17 unsheltered households (25.7%) reported they were not receiving any type of non-cash benefit on the night of the count. Food Stamps (SNAP) and was the top reported non-cash benefits among this group, with 47% receiving this benefit. In addition, 31.8% were receiving Medicaid and 15.2% were receiving Medicare.

Length of Homelessness

As shown in Figure 25, more unsheltered homeless respondents (30, 44.2%) reported their households’ most recent, continuous episode of homelessness had lasted for more than a year than any other length of time. 14.7% of households reported being homeless between 1 month and 1 day and 3 months.

Cause of Homelessness

When asked to share the primary factor that contributed to, or caused, their homelessness, more unsheltered persons said loss or reduction of job income or benefits (24%) than any other factor. As Figure 26 shows, other common factors reported included being asked to leave a shared residence and drug or alcohol abuse.
