This report was prepared for
The New Jersey Housing and Mortgage Finance Agency
by
Monarch Housing Associates
I. Introduction

NJ Counts 2015

NJ Counts 2015, New Jersey’s annual Point-In-Time (PIT) Count of the Homeless, provides a statewide snapshot of homeless households in our communities; where they find shelter, what their needs are, and what factors contribute to making them homeless. The 2015 Count reveals important demographic and other information about families and individuals who were homeless on the night of Tuesday, January 27th, 2015 or Tuesday, February 3rd, 2015 (depending on the community, see limitations below), and was carried out with the help of government agencies, community-based organizations, and local volunteers.

In New Jersey, each County’s count is planned, coordinated, and carried out locally, and the information gathered enables each community to better allocate housing resources and services in order to prevent and end homelessness. The PIT Count is the only opportunity throughout the year for most communities to take a comprehensive look at the total homeless population, and is especially crucial in assessing the needs of the unsheltered homeless.

Acknowledgements

Monarch would like to thank all Point-In-Time Coordinators, homeless service providers, agencies, and volunteers who participated in NJ Counts 2015. Monarch would also like to specifically thank Bergen County for providing a Spanish translation of the 2015 paper survey tool.

Finally, a special acknowledgement is given to all the respondents who were willing to share personal information about themselves and their households’ experiences in order to help our communities better understand and assist the homeless.

Funding for coordinating New Jersey’s 2015 Point-In-Time and producing this report was provided by New Jersey’s Housing and Mortgage Finance Agency (NJHMFA).

This Report

The findings in this report are presented in the following sections:

1. Total homeless population;
2. Those experiencing chronic homelessness (families and individuals that have been homeless for a year or longer, or who have experienced at least four episodes of homelessness in the last three years, and have a disabled head of household); and
3. Unsheltered families and individuals;
The structure of this report is intended to provide not only an overall snapshot of the homeless population counted in the Point-In-Time, but also to focus attention on the homeless subpopulations that are the most in need, and those that represent federal funding priorities set forth by the U.S. Department of Housing and Urban Development (HUD).

In addition to the main findings presented in the body of this report, Appendix A includes charts illustrating the responses to all survey questions that were part of the 2015 Point-In-Time Count.

II. Data Collection and Methodology

Requirements for the Count

As part of its Continuum of Care (CoC) application for homelessness funding, HUD requires that jurisdictions across the nation conduct a statistically reliable and unduplicated count of the homeless for one overnight period during the last 10 days of January. New Jersey's Continuums of Care (regional networks of organizations, agencies, and community stakeholders that plan local efforts to help the homeless) conduct an annual count of sheltered homeless persons (i.e. persons in emergency shelter, transitional housing for the homeless, and Safe Haven programs) and at least a biennial count of unsheltered homeless persons. 2015 was a HUD-required full count year.

In their Point-In-Time Count, CoCs must count and report all individuals and families who meet the criteria in paragraph (1)(i) of the homeless definition in 24 CFR 91.5 of HUD's Homeless Definition Rule on the night designated for the count. This includes individuals and families who are:

- **Sheltered**, or "living in a supervised publicly or privately operated shelter designated to provide temporary living arrangement (including congregate shelters, transitional housing, and hotels and motels paid for by charitable organizations or by federal, state, or local government programs for low-income individuals)," or

- **Unsheltered**, “with a primary nighttime residence that is a public or private place not designed for or ordinarily used as a regular sleeping accommodation for human beings, including a car, park, abandoned building, bus or train station, airport, or camping ground.”

Because this report focuses on those respondents who meet HUD’s definition of homeless, it does not include information about those who may be at risk of homelessness, precariously housed, or considered homeless under other federal statutes. Persons who, on the night of the count, were living doubled up with another household, living in illegal or overcrowded units, being discharged from a jail or health facility with no subsequent residence, scheduled to be evicted, or paying for its own motel unit were not considered
homeless. All survey information collected for respondents who were at risk of homelessness or precariously housed was preserved and shared with each community for local planning purposes, but is not included in this report unless otherwise noted.

Data Collection Methods

Monarch Housing Associates provided each of New Jersey’s 21 counties with in-person training, online video and print training guides, a practice online survey tool, and technical assistance to aid in the data collection process for New Jersey’s 2015 Point-In-Time Count. Point-In-Time Coordinators in each county disseminated PIT training materials and helped facilitate local planning around implementation of the PIT count in their communities.

For the second year, the count of homeless persons who were sheltered on the night of the point in time was primarily taken from New Jersey’s Homeless Management Information System (HMIS), while the count for the unsheltered and those sheltered by non-HMIS programs was conducted using a Paper Survey tool, personal interviews, and agency client records. This strategy was designed in accordance with HUD guidance regarding conducting both sheltered and unsheltered Point-In-Time Counts.

The 2015 PIT Survey tool closely mirrors information collected in HMIS so that the data was comparable for important factors such as household characteristics, income, services needed, and factors contributing to homelessness. Agencies updated all HMIS data to accurately reflect the night of the count, and those with programs that were non HMIS-participating submitted information from interviews utilizing the Paper Survey tool through SurveyMonkey.

Limitations

1. HUD requires a count of sheltered homeless persons and families annually, but only a biennial count of those who are unsheltered. Even though New Jersey conducts both a sheltered and unsheltered count each year, the comprehensiveness of the unsheltered count may be influenced during the non-HUD required full count years. This report includes comparison data from 2011 to 2015. 2012 and 2014 were not HUD required full reporting years while 2011, 2013 and 2015 were.

2. The winter of 2014 to 2015 was particularly cold, with parts of New Jersey seeing significant snow accumulation. NJ Counts 2015 was originally scheduled to take place Tuesday, January 27th, 2015. Unfortunately, there was a blizzard predicted for the night of the PIT, which led to about half of the Counties in the State postponing the PIT activities to the following week, Tuesday, February 3rd, 2015. This weather led to half the communities counting the households that were homeless on the night of January 27th and the other half counting those that were homeless on the night of February 3rd. Besides leaving the date of the count inconsistent, this winter weather forced many communities to set up emergency warming stations or shelters for the unsheltered.
While this means that many more people are able to sleep in a warm place, it may skew Point-In-Time data to show fewer unsheltered households than are actually present in communities on a regular basis.

3. The information presented in this report is based on survey interviews and agency HMIS records. In some cases, survey respondents did not answer every question completely, and homeless provider agencies did not report all client information on the night of the count. For this reason, all charts presented in this report will be based on the responses received, while all percentages will be based on the total households or individuals served and may not equal 100% in each category due to possible missing data.

4. Because the Point-In-Time Count represents only one night during the last ten days of January, it is widely accepted that the PIT will undercount the overall homeless population. Undercounting may occur due to difficulty finding those living on the street, incomplete information for people who do not agree to complete the survey, a shortage of volunteers to cover a geographic area, or homeless persons choosing not to seek housing services on the night of the count. This data should not be viewed as a comprehensive measurement of all families and individuals who experience homelessness throughout the year, but rather as a minimum number of persons who experience homelessness in New Jersey on a given night.

De-duplication

Monarch Housing Associates collected and merged all HMIS and SurveyMonkey Point-In-Time data from each community into its combined database. Monarch generated two unique identifiers, one more general and one more in-depth, based on the identifying information for each individual record. Using a formula, these unique identifiers were compared to all identifiers for other records in the database to identify potential duplicates.

All duplicates detected through comparison of unique identifiers were then de-duplicated by the following process:

1. Multiple HMIS records where all fields match – a single record was preserved, and all duplicates were removed;
2. Multiple SurveyMonkey records where all fields match – a single record was preserved, and all duplicates were removed;
3. Comparing HMIS to SurveyMonkey records where unique identifiers, disabilities, income sources, household size, and location on the night of the count all match – the HMIS record was preserved and the SurveyMonkey duplicates were removed.

Following this de-duplication of the data, communities were given preliminary data to review all identified duplicates and records with missing data. Communities were then able to update records with missing information and/or request any additional de-duplication they determined prudent. Monarch then updated and removed additional records based on community feedback prior to completing its final analysis and report.
III. Findings for Total Homeless Population

Key Findings

- On the night of January 27th, 2015 a total of 33 households, including 57 persons, were experiencing homelessness in Sussex County, according to the 2015 Point-In-Time Count.
- A total of 8 households, with 14 persons, were identified as chronically homeless.
- 2 unsheltered homeless persons were counted.

Total Homeless Population

As a note, due to the refinement of HUD’s definition of homeless, updates were made to some of the emergency shelter data that was released in the 2014 report. The 2015 report compares 2015 data to the updated data that was submitted to HUD for 2014. For this reason, while the comparisons in this report are accurate, the numbers listed for 2014 may not match the report that was released last year for this reason.

On the night of January 27th, 2015, a total of 57 persons, in 33 households, were experiencing homelessness in Sussex County, according to the 2015 Point-In-Time Count. This is a decrease of 41 households (55.4%) and 49 persons (46.2%) from 2014. Sussex County had 0.6% of New Jersey’s statewide homeless population in 2015.

Fig. 1. 5-Year Comparison of Total Homeless Population by Housing Situation
Figure 1 shows that, in 2015, 31 homeless households were sheltered and 2 were living unsheltered on the night of the count. The total number of those counted as sheltered represents a decrease of 39 households (55.7%) from 2014. There were also 2 few unsheltered households when compared to 2014.

Figure 1 also shows that, over the past five years, while the total number of homeless persons and households has been fluctuating in Sussex County, the overall trend is a decrease in homelessness. From 2011 to 2015 Sussex County has seen a decrease of 58 persons (54.2%).

As Figure 2 shows, 7% of homeless households counted in Sussex County reported that their last permanent address prior to becoming homeless was outside of the county.

Homeless Families and Individuals

When reading the data regarding different types of homeless households, it is important for the reader to remember that, in this report, ‘household’ means “any group of persons who, if they were able to attain permanent housing, would choose to live together; and, shared the same sleeping arrangements on the night of the count.” Three different types of households are discussed below: households with adults and children under 18 (‘families’), households without children (‘individuals’), and households with only children under 18 (‘unaccompanied youth’).

Of the 33 homeless households counted in Sussex County in 2015, 15 (45.5%) were families with at least one child under the age of 18 and one adult, a decrease of 1 family from 2014. These families included 38 persons, 20 children under age 18, and 18 adults. The average family size was 2.9 persons. Figure 3 shows that 2 families (13.3%) were staying in transitional housing, while the remaining 13 (86.7%) were in emergency shelters.
54.5% of the homeless households (18) counted in Sussex County were households without children under 18, and they were composed of 19 persons. The majority of adult only households (61.1%), including the 1 multiple-adult household was in an emergency shelter.

Demographics

42.1% (24) of persons experiencing homelessness in Sussex County on the night of the count were adults over age 24. There were a total of 13 (22.8%) homeless young adults between 18 and 24 years old, and 20 (35.1%) children under 18 years old as well. Figure 4 shows that the majority of homeless children who were under the age of 18 were between 0 and 5 years of age (65%). This age range as well 18 to 24 years were the most represented categories among homeless persons in Sussex County.

64.9% (37) of homeless respondents were female, and 35.1% (20) were male.

77.2% of persons identified their race as White, making that the largest racial subgroup of homeless persons reported. The next largest group self-identified as Black or African American (19.3%), followed by those identifying as Pacific Islander/Native Hawaiian (3.5%). With regard to ethnicity, 24.6% of respondents identified themselves as Hispanic.

Disabilities

Figure 5 illustrates that 42% of homeless persons reported having some type of disability. 56.8% of adults 18 or older reported some type of disability compared to 15% of children. Figure 6 shows the number of the homeless persons that identified as having various disabilities. The most prevalent disabilities were mental health issues and physical disabilities.
Among disabled adults, 61.9% reported mental health issues making this the most prevalent disability; representing 35.1% of the total adult homeless population. 47.6% of disabled adults also reported a physical disability. All 3 disabled children reported a developmental disability.

Victims of Domestic Violence

On the night of the count, in Sussex County, 12 homeless households reported having a victim of domestic violence, 3 less than 2014. Figure 7 shows that 6 (50%) of these households were individual adult households, while the same number were families with at least 1 adult and 1 child under 18 were counted. 7 of the 12 households were in emergency shelters, and 1 individual household was unsheltered.

Veterans

In its plan, Opening Doors: Federal Strategic Plan to Prevent and End Homelessness, the United States Interagency Council on Homelessness (USICH) has prioritized ending homelessness among veterans by 2015. Many communities in New Jersey have also been working hard to end homelessness among our country’s servicemen and women.

There was 1 homeless individual veteran staying in an emergency shelter in Sussex County on the night of the point in time count.
The individual veteran that was counted was male and identified his race as White. He was between 55 and 64 and did not report having a disability. This veteran was not connected to veteran specific benefits and was seeking emergency shelter, emergency food and transportation services.

**Income and Benefits**

Among all the households experiencing homelessness on the night of the count, 36.4% had no source of income, and 12.1% reported having earned income. The top two reported sources of income were Temporary Assistance for Needy Families (TANF) and General Assistance, which were received by 21.2% and 15.2% of households, respectively.

Figure 9 shows the average monthly income for all homeless households.

<table>
<thead>
<tr>
<th>Number of Households</th>
<th>Emergency Shelter</th>
<th>Transitional Housing</th>
<th>Unsheltered</th>
</tr>
</thead>
<tbody>
<tr>
<td>Average for All Households</td>
<td>$381.95</td>
<td>$252.00</td>
<td>$1,000.00</td>
</tr>
</tbody>
</table>

18.2% of respondents reported that their household was receiving no kind of non-cash benefit on the night of the count. Food Stamps, or the Supplemental Nutrition Assistance Program (SNAP) was the top reported non-cash benefit, and was received by 63.6% of households. 60.6% were also connected to Medicaid benefits.

**Length of Homelessness**

Figure 10 shows that 12 (36.4%) of households reported that their most recent, continuous episode of homelessness had lasted between 1 and 3 months. This is a shift from 2014, when the most commonly reported length of homelessness was more than 1 year.
Cause of Homelessness

When asked to share the primary factor that contributed to, or caused, their homelessness, more respondents attributed their homelessness to being asked to leave a shared residence (10 households, 30.3%) than any other cause. As Figure 11 shows, the next most common factor reported was domestic violence (24.2%).

When homeless respondents were asked ‘what was your residence prior to your current living situation?’ more said they were staying or living with friends or family (45.5%) than any other type of residence. 24.2% reported residing in permanent housing prior to their current living situation.

IV. Findings for the Chronically Homeless

Someone with a long-term disabling condition, who has been continually homeless for a year or more, or at least four times in the past three years, meets HUD’s definition of chronically homeless. Any family with one adult that meets this definition is considered a chronically homeless family.

HUD currently has a goal of ending chronic homelessness by 2017. This goal reflects the urgency of helping to house those persons who have not been able to remain stably housed over the course of an extended period of time. Chronically Homeless persons are among the most vulnerable homeless groups, and providing effective supportive services and case management may be required in order to help some stay in the housing they need. Prioritization of new Continuum of Care funding opportunities has recently been giving some communities in New Jersey new resources for housing this subgroup.
Total Chronically Homeless Population

8 households, made up of 14 total persons, were chronically homeless in Sussex County, according to the 2015 Point-In-Time Count, a decrease of 9 households (52.9%) and 6 persons (30%) from 2014. The rate of chronic homelessness as a percentage of overall homelessness was 24.6% for 2015.

![Fig. 12. 5-Year Comparison of Chronic Homeless Population by Housing Situation](image)

Figure 12 shows the number of chronically homeless persons who were sheltered or living unsheltered in Sussex County from 2011 to 2015. Over the past five years, the overall number of chronically homeless persons has fluctuated but has increased from 2011 to 2015 by 4 persons.

Families and Individuals

Of the 8 chronically homeless households counted in 2015, 3 (37.5%) were families with at least one child under the age of 18 and one adult, an increase of 1 family from 2014. These families included 9 persons, making the average family size 3. All of the chronically homeless families were in emergency shelters on the night of the count.

![Fig. 13. Chronically Homeless Households Type by Housing Situation](image)

There were 5 chronically homeless adult individuals counted in Sussex County, making up 62.5% of the chronically homeless population. 2 of the 5 (40%) were unsheltered on the night of the count.
Demographics

Of the 14 total chronically homeless persons, 6 (42.9%) were children under the age of 18. The remaining 8 persons (57.1%) were adults over the age of 24. Children between the ages of 6 and 17 was the most common age range among all chronically homeless persons, as seen in Figure 14.

64.3% of those counted as chronically homeless were female, and 35.7% were male.

All chronically homeless persons reported their race as White, and 14.3% identified their ethnicity as Hispanic.

Disabilities

In order to meet the definition of chronically homeless, at least one adult in each household must have some kind of disability. The disabilities most commonly identified among these disabled persons were mental health issues (100%) and physical disabilities (75%). The complete numbers of reported disabilities among the chronically homeless can be seen in Figure 15.

Subpopulations

On the night of the count, 5 chronically homeless households in Sussex County reported having victims of domestic violence (35.7%). 3 of the 5 households were families, and only 1 individual household was unsheltered.

There were 0 chronically homeless veterans identified on the night of the count.
Income and Benefits

Among all the chronically homeless households on the night of the count, 25% reported receiving no type of cash income. Figure 16 shows the sources of income received. The most common source of cash income among chronically homeless households was TANF, which was received by 37.5%. No households reported any earned income.

There were no chronically homeless households that reported they were not receiving any type of non-cash benefit on the night of the count. Food Stamps (SNAP) and Medicaid were the top reported non-cash benefits with each being reported by 50% of households.

Length of Homelessness

Figure 17 shows that 37.5% of chronically homeless households reported that their most recent, continuous episode of homelessness had lasted for more than 1 year. This is a shift from 2014 in which 88.2% of chronically homeless households reported their homelessness lasted more than 1 year.

Cause of Homelessness

When asked to share the primary factor that contributed to, or caused, their homelessness, more chronically homeless households (37.5%) cited domestic violence than any other cause. Figure 18 has the full list of the causes reported by chronically homeless households.
V. Findings for the Unsheltered Homeless

HUD’s definition of “unsheltered homeless” applies to any individual or family “with a primary nighttime residence that is a public or private place not designed for or ordinarily used as a regular sleeping accommodation for human beings, including a car, park, abandoned building, bus or train station, airport, or camping ground.”

Unsheltered homeless individuals and families are among those with the most critical housing needs in a community. The unsheltered are especially vulnerable in the cold weather and the elements, which are in evidence at the end of January when the Count takes place. The Point-In-Time survey can play an important role in helping communities understand why some of the homeless remain unsheltered, and who is included in this group.
Total Unsheltered Homeless Population

2 households, made up of 2 persons, were living unsheltered in Sussex County, according to the 2015 Point-In-Time Count. This is a decrease of 2 households and persons (50%) from 2014.

Figure 19 shows the number of unsheltered respondents from 2011 to 2015. Since 2012, the number of unsheltered persons in Sussex County has dropped by 16 persons, or 88.9%.

Families and Individuals

There were 0 unsheltered families with adults and children counted in 2015.

Both unsheltered households counted were households with just 1 adult individual.

Demographics

Both unsheltered individuals counted in 2015 were between the ages of 35 and 44 years old.

Both individuals were male and both identified their race as White. Neither unsheltered individual identified their ethnicity as Hispanic. The largest portion of the 2 unsheltered persons counted in 2015, 100%, was between 35 and 44 years old.

Disabilities

Both unsheltered individual reported being disabled. The reported disabilities can be seen in Figure 20.
Subpopulations

On the night of the count, 1 unsheltered homeless individual in Sussex County reported being a victim of domestic violence.

There were 0 unsheltered veterans counted on the night of the count.

Income and Benefits

Among the 2 unsheltered individuals counted in Sussex County on the night of the PIT, only 1 provided a response when asked about their sources of income. This 1 household reported having General Assistance and had an average monthly income of $1,000.

Both unsheltered households reported receiving Food Stamps/SNAP and reported being connected to Medicaid benefits.

Length of Homelessness

Both unsheltered households reported that their most recent, continuous episode of homeless had lasted between 6 months a 1 year.

Cause of Homelessness

When asked to share the primary factor that contributed to, or caused, their homelessness, 1 unsheltered household reported a loss or reduction of job income or benefits, while the other stated they were asked to leave a shared residence, as seen in Figure 22.
